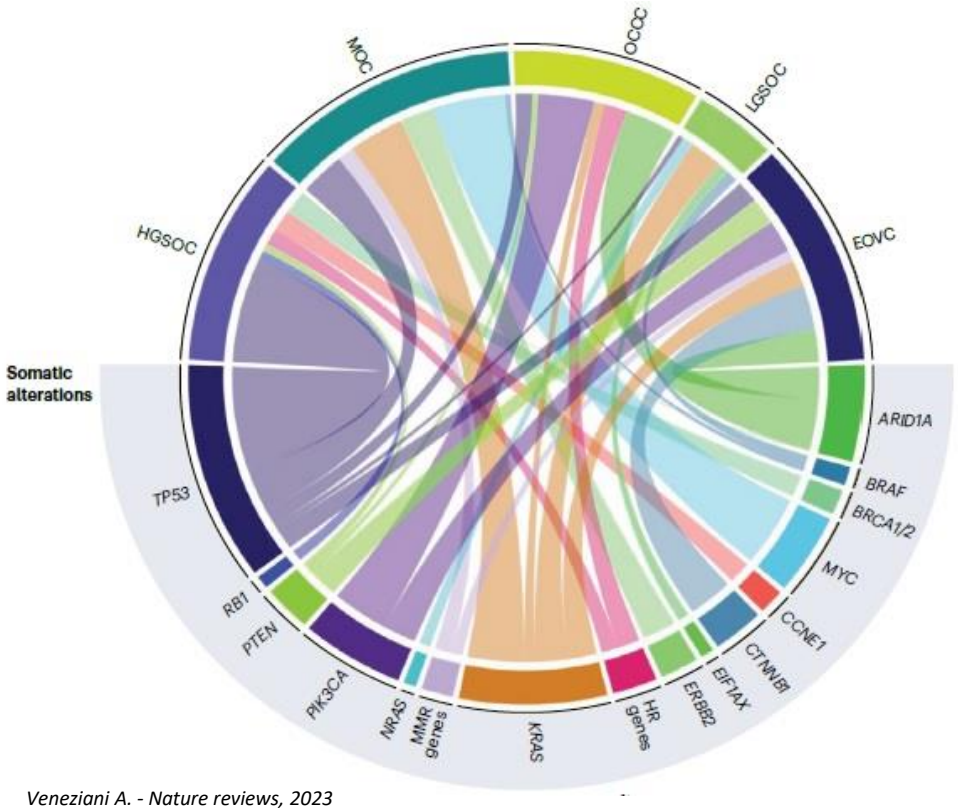
Outline

- OC Molecular Heterogeneity
- Genomic Instability in HGSOC
- The importance of molecular diagnostics in HGSOC
- Current Laboratory Practice
- Challengies in HRD testing
- Hereditary OC

Molecular Landscape of OC



Veneziani A. - Nature reviews, 2023

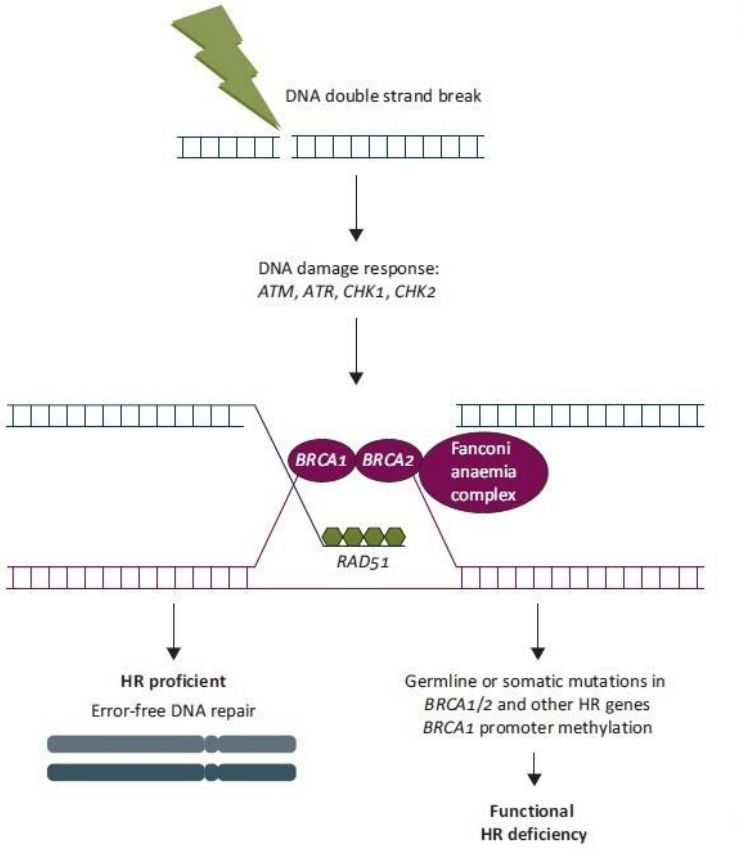
2020 WHO Classification and molecular features

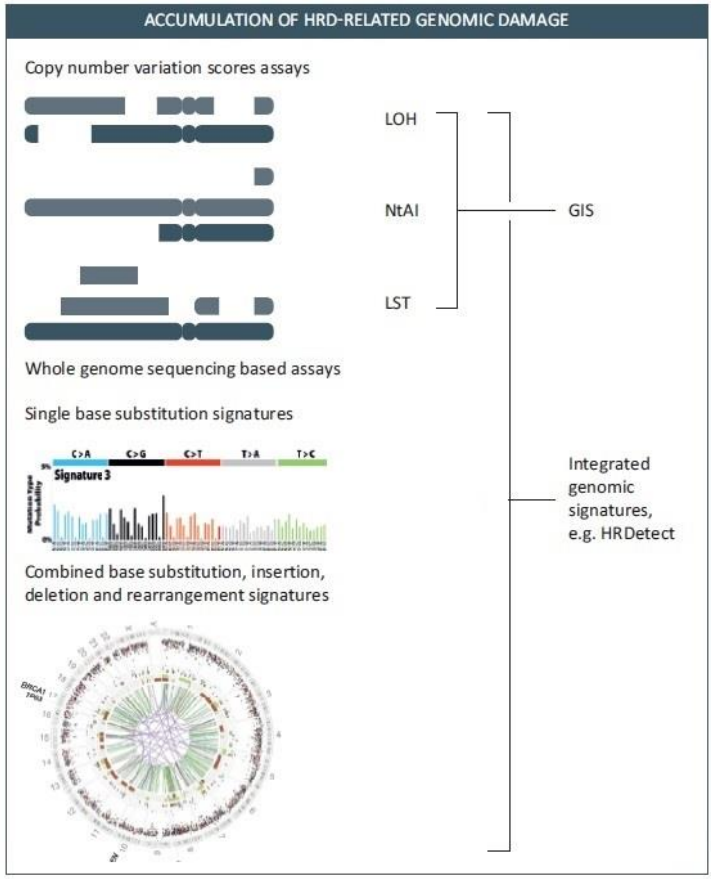
- **EOVC:** ~10%, alterations in MMR genes (Lynch), ARID1A, KRAS, CTNNB1, PTEN, POLE, FBXW7, SOX8, HER2, TP53.
- **OCCC:** ~10%, alterations in ARID1A, PIK3CA, TP53, TERT, MMR genes (Lynch).
- **LGSOC:** ~5%, alterations in MAPK (eg. BRAF), KRAS, AKT-MTOR pathway.
- **MOC**: ~5%, alterations in KRAS, TP53, CTNNB1, APC HER2amp, MMR genes (Lynch).
- **HGSOC**: ~70%, alterations in TP53, BRCA1/2, HR pathway genes, NF1, RB1, CCNE1.

Genomic Instability in HGSOC

~ 50% HGSOC exhibit Homologous Recombination Deficiency

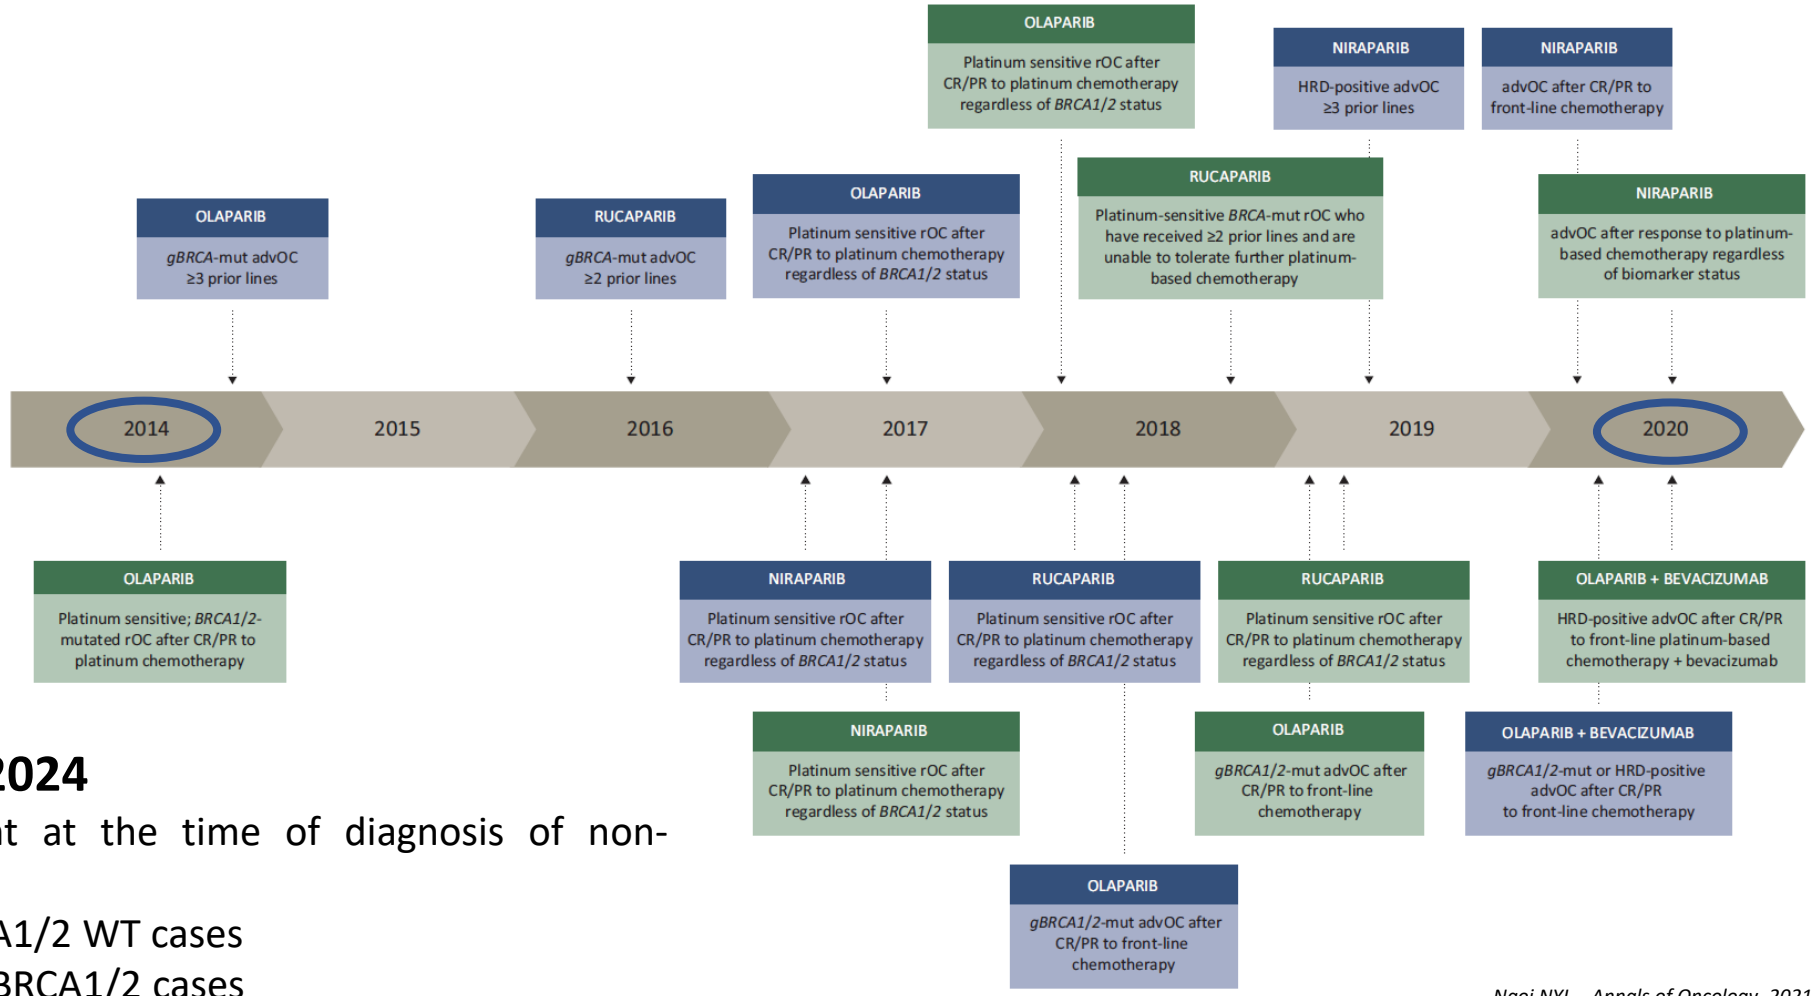
- 50% of HRD HGSOCs is explained through germline or somatic BRCA1/2 mutations
- …and the other 50%?





Miller E. – Annals of Oncology, 2020

HGSOC molecular diagnostics and PARPi



Ngoi NYL – Annals of Oncology, 2021

ESMO recommendations 2024

- Somatic BRCA1/2 assessment at the time of diagnosis of non-miconous OC
- HRD score assessment in BRCA1/2 WT cases
- Germline assessment for mutBRCA1/2 cases
- NO somatic assessment for other HR genes
- Germline assessment of HR genes in case of suspected familiarity

ESMO NGS Recommendations 2024

CASE 2	BRCA neg	HRD POS	HRR neg

- Therapy
- Genetic counselling
- High-risk families loss!

Hereditary OC

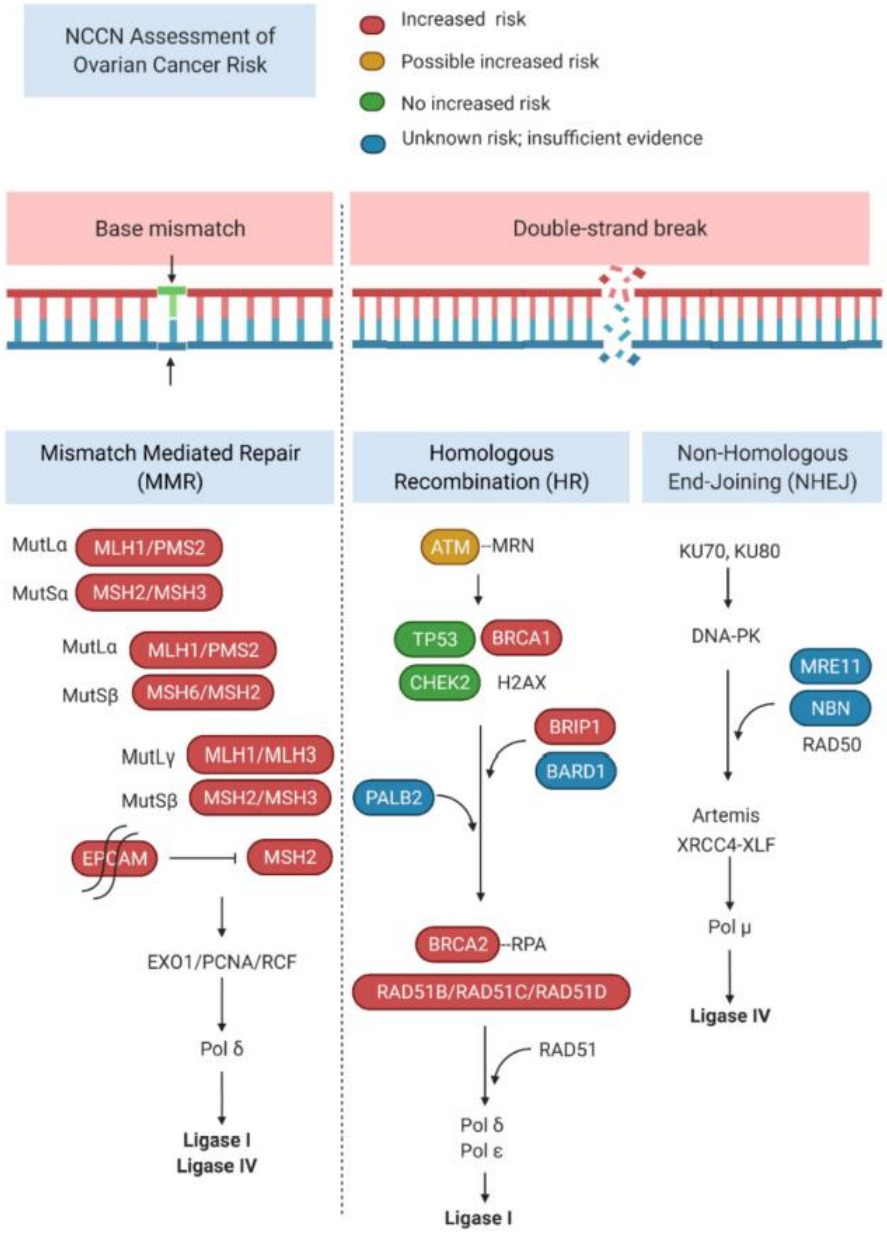
25% OC patients exhibit BC/OC family history. Of those:

- 40% are BRCA1/2 PV carriers
- 25% are carriers of PV in other genes

DSB – HR - HBOC Syndrome

- HIGH RISK genes: BRCA1 (~40%), BRCA2 (~18%)
- MODERATE RISK genes: RAD51C/D, PALB2, BRIP1, ATM.

- **MMR** (Mismatch Repair) – Lynch Syndrome
- HIGH RISK genes: MLH1 (~11%), MSH2-EPCAM (~17%), MSH6 (~10%), PMS2 (?).



Samuel et al. - Cells, 2022

Hereditary OC

NOTA 9. CRITERI DI "SOSPETTA EREDITARIETÀ" PER L'INVIO ALLA CONSULENZA GENETICA ONCOLOGICA TRADIZIONALE

- Per la valutazione dei criteri di sospetta ereditarietà è fondamentale che il clinico faccia riferimento sia alla storia personale della paziente, sia alla storia familiare di malattia.

Numero di soggetti affetti presenti in famiglia	Condizione
1 caso dei seguenti tumori:	Tumore della mammella in età ≤ 40 anni[a]
	2 tumori primari della mammella in età ≤ 50[b]
	Tumore della mammella maschile
	Tumore della mammella e dell'ovaio[c] nella stessa paziente
	Tumore della mammella di tipo "triplo negativo" (qualsiasi età)[a]
	Tumore epiteliale ovarico non mucinoso e non borderline, carcinoma della tuba o tumore primitivo peritoneale
2 casi in una qualsiasi combinazione dei seguenti tumori[d]:	Tumore della mammella ≤ 50 anni
	2 tumori primari della mammella[b]
	Tumore epiteliale ovarico non mucinoso e non borderline, carcinoma della tuba o tumore primitivo peritoneale
	Adenocarcinoma del pancreas
	Tumore della prostata[e]
3 casi in una qualsiasi combinazione dei seguenti tumori:	Tumore della mammella (qualsiasi età)
	Tumore della prostata ≤ 60 anni
	Adenocarcinoma del pancreas
	Tumore dell'ovaio
-	Presenza nella famiglia di VP nota

PDTA Tumori Eredo-Familiari di Mammella e Ovaio – ROV 2024

Cancer Type and Specific Population	More Strongly Recommended (higher relative risk of cancer or highly actionable)	Less Strongly Recommended (moderate relative risk of cancer or potential impact for therapy/change in medical management)
Ovarian cancer (epithelial)	*BRCA1, BRCA2, BRIP1, EPCAM, MLH1, MSH2, MSH6, PALB2, PMS2, RAD51C, RAD51D*	*ATM*

SUMMARY OF YOUR PERFORMANCE IN THIS SCHEME

Assessment Category	Performance* (mean score)
Genotyping	2.00
Interpretation	2.00
Patient Identifiers and Clerical Accuracy	2.00
Scheme result (SATISFACTORY or POOR)	SATISFACTORY

ONCOGENETIC Panel	Geni analizzati
Mammella	*BRCA1, BRCA2, TP53, PTEN, PALB2, ATM, CHEK2, STK11, CDH1, BARD1*
Ovaio	*BRCA1, BRCA2, EPCAM, MLH1, MSH2, MSH6, PMS2, PALB2, BRIP1, RAD51C, RAD51D,ATM*
Colon-retto/poliposi	*APC, BMPR1A, GREM1, EPCAM, MLH1, MSH2, MSH3, MSH6, MUTYH, NTHL1, PMS2, POLD1, POLE, PTEN, RNF43, RPS20, SMAD4, STK11*
Rene	*c-MET, VHL, FH, PTEN, FLCN, TSC1, TSC2, SDHA, SDHB, SDHC, SDHD, BAP1, MITF*
Pancreas	*CDKN2A, STK11, BRCA1, BRCA2, PALB2, EPCAM, MLH1, MSH2, MSH6, PMS2, ATM, TP53*
Iperparatiroidismo primario	*MEN1, CDKN1B, RET, CDC73, CASR, GNA11, AP2S1, CDKN1A, CDKN2B, CDKN2C*
Melanoma familiare	*CDKN2A, CDK4, POT1, BAP1, MITF, TERT*
Stomaco	*CDH1, EPCAM, MSH2, MSH6, MLH1, PMS2, EPCAM, PTEN, STK11, TP53, APC*
Prostata	*BRCA2, BRCA1, ATM, CHEK2, PALB2, BRIP1, HOXB13, EPCAM*, MLH1*, MSH2, MSH6, PMS2*
Feocromocitoma/paragangl ioma	*FH, NF1, RET, SDHB, SDHD, VHL, MEN1, SDHA, SDHAF2, SDHC, TMEM127, MAX*

Take Home Message

- Genomic Instability is the hallmark HGSOC
- ESCAT1 biomarkers should be tested at the same time
- HRD data interpretation may be challenging
- HRD testing could be the doorway to germline testing
- Genetic Counselling and germline testing are common practice for OC patients

Thank You!
